

FLEXIBLE, RELIABLE AND COMPACT.

Our LA160 sachet machine

! Cost-effective packaging!

The LA160 is ideal for clinical studies and new product launches, as well as for packaging small batches.

1 Quality on all levels

Machine, packaging and product meet all quality requirements. The LA160 is robust and designed for a long service life. The machine's two separate sealing stations guarantee the seal on the sachet packaging. Unrivalled dosing accuracy, especially with small quantities, is a key part of our quality promise. The result: wrinkle-free, airtight sachets.

2 Ready for the future: Flexible dosing systems

How to package tablets today, liquid products tomorrow and granules or powders the day after? The LA160 can be adapted flexibly to meet your production requirements: it may be years since you purchased an LA 160, but you can still decide – pump-based dosing systems for liquid or paste products, auger dosing for products which do not flow freely, microsphere dosing for free-flowing products or tablet dosing.

3 Risk-free production thanks to complete control

Safety is always paramount: optical monitoring of fill material, ejection counter-checking, OCR and OCV print monitoring, code reading or seal seam inspection. The LA160 can be equipped with all required safety functions and can also be extended at a later date.

4 Small footprint, great satisfaction

With a footprint of only 1 m² the LA160 is extremely compact and space-saving. The machine is also easy to use, to the satisfaction of our customers' operators.
